

Overview

SITRANS LC300 is an inverse frequency shift capacitance continuous level transmitter for liquids and solids applications. It is ideal for standard industrial applications in chemical, hydrocarbon processing, food and beverage, water, wastewater, and mining, aggregate, and cement industries.

Benefits

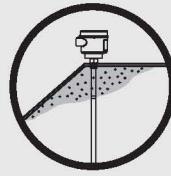

- Patented Active-Shield technology so measurement is unaffected by material buildup in active shield section
- Highly accurate and reliable PFA-lined probes
- Integrated local LCD display
- 2-wire (4 to 20 mA) current loop design
- Current signalling according to NAMUR NE 43
- Push-button calibration and programming
- Stilling well (ground tube) version for low dielectric media and non-metallic vessels

Application

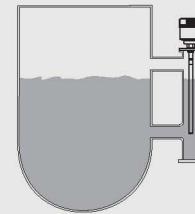

SITRANS LC300 is a 2-wire level measurement instrument combining a sophisticated, yet easy-to-adjust microprocessor with field-proven probes. It is available in four versions: rod, rod with stilling well, cable with PFA insulation, and cable without PFA insulation.

Materials with low or high dielectric properties are accurately measured and patented Active-Shield technology helps in ignoring the effects of buildup or condensation near vessel nozzle.

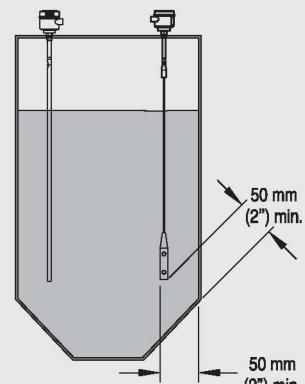

- Key Applications: Conductive and non-conductive media including: liquids and solids in standard industrial processes, bulk solids applications involving dust, and chemical processes involving vapour

Configuration**Installation**

Build up of material or condensation in active shield area does not affect operation.

Mounting on a bypass

Install probe at least 50 mm (2") from tank wall.
Note angle of repose and adjust accordingly.

Thermal Isolator

Without thermal isolator

With thermal isolator [for process connection temperatures over +85 °C (+185 °F)]

Selection and Ordering data**SITRANS LC300, PFA coated cable version**

An inverse frequency shift capacitance continuous level transmitter for liquids and solids applications.

Wetted Seals

FKM

FFKM [for process temperatures above -20 °C (-4 °F)]

Probe Material

PFA coated cable and 316L stainless steel cable weight, PEEK isolator and PFA lined active shield

¹⁾ Flange bolting patterns and facings dimensionally correspond to the applicable ASME B16.5 or EN 1092-1 standard.

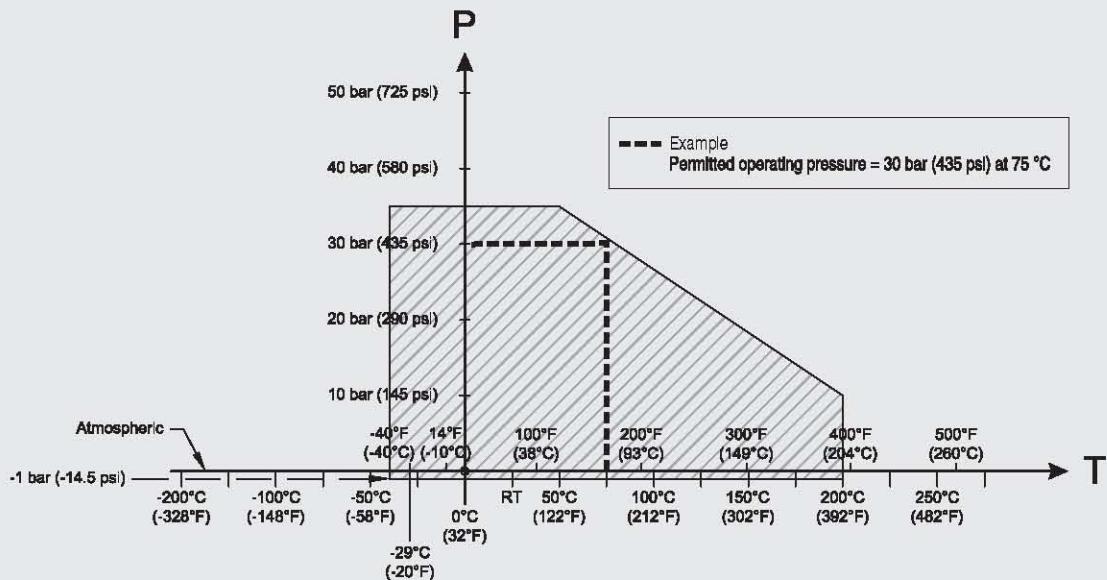

²⁾ Cable lengths from 15000 (590.55") to 25000 mm (984.25") can be used in non-conductive media. Contact Factory for assistance.

Notes:

- 1) Rod version Y02: Shield length = 120 mm (4.7") for threaded including process connection thread length
- 2) For non-conductive applications only. Non-insulated cable can be shortened on site. Weight is included in measuring length.
- 3) For liquids and solids applications. Insulated cable cannot be shortened. Weight is not included in measuring length.
- 4) For conductive materials, the measuring length includes the exposed PFA insulated cable only. Any fluid contact with the upper rod assembly will result in a short circuit and incorrect readings.
